# FCC§15.247 (i), §1.1310 & §2.1091 –RF EXPOSURE

### **Applicable Standard**

According to subpart 15.247 (i) and subpart 1.1310, 2.1091 systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

Report No.: RSHA190910003-00B

| Limits for General Population/Uncontrolled Exposure |                                  |                                  |                        |                          |  |  |  |  |  |

| 1500-100,000  | /                                | /                                | 1.0                    | 30                       |  |  |  |  |  |

f = frequency in MHz; \* = Plane-wave equivalent power density

## Calculated Formulary:

Predication of MPE limit at a given distance

 $S = PG/4 \pi R^2 = power density (in appropriate units, e.g. mW/cm2);$ 

P = power input to the antenna (in appropriate units, e.g., mW);

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain;

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

For simultaneously transmit system, the calculated power density should comply with:

$$\sum_{i} \frac{S_{i}}{S_{Limit,i}} \le 1$$

Report No.: RSHA190910003-00B

#### Note

- 1). The target output power was declared by the manufacturer.
- 2) The LTE module FCC ID: RI7ME910C1NA.
- 3) WiFi ,BLE and LTE can transmit simultaneously; the worst condition was as below:

$$\sum_{i} \frac{S_{i}}{S_{\mathit{Limit},i}} = 0.0063/1.00 + 0.0007/1.00 + 0.0517/0.47 = 0.0063 + 0.0007 + 0.11 = 0.1170 < 1.0$$

**Result:** The device meet FCC MPE at 20 cm distance.
